

Nordberg HR-Eliptex (HREF) Feeder

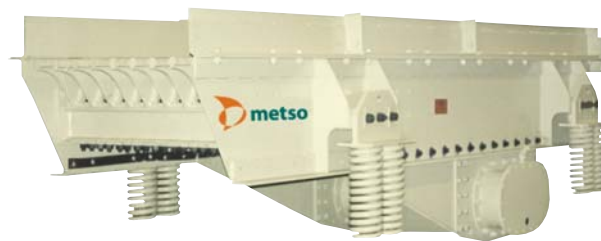

Nordberg HR-Eliptex Feeder (HREF)

The Nordberg **HR-Eliptex Feeder (HREF)** is built for long lasting durability while offering a great deal of application flexibility. Adjustable grizzly openings and deck slope, makes this feeder great for several applications. The extra heavy-duty construction easily handles the impact of large rocks. Heavy tubular beams, egg crate construction and extra thick deck plates resist twisting. This vibrator produces a unique, elliptical motion with both horizontal and vertical components. For flexibility, reliability and high capacity at an economical price, check into the Nordberg HR-Eliptex Feeder.

Features & Benefits

- Easy to change deck liners
- Fixed or adjustable spring mounts
- Rounded, tapered cast manganese grizzly bars in 4' and 6' lengths
- Low profile design
- Spring mounted suspension to accommodate impact loads
- Oil lubrication for cooler running, less maintenance and longer life
- Individually removable grizzlies are easy to respace for size separation

Technical Specifications

Length	14' to 24'
Width	40" up to 76"
Installed angle:	0° to 15°

Solid pan or pan with cast manganese grizzly sections.

Application Guidelines

Truck dump or end loader feed into a bedded hopper.

Maximum lump size is not to exceed 75% of feeder width. If larger, consult factory.
