

International Water Well Drills (Lightweight)

TH5/TH5M

The TH5/TH5M drill module is an ultra lightweight hydraulic powered, multi-purpose drill designed for shallow air/mud rotary or downhole drilling. This module can be combined with a choice of circulation systems and drill pipe to enable drilling from 101 to 200 mm (4 to 8 in.) diameter holes in any formation to depths of 120 m (400 ft.). Ideal for projects in tight locations or remote village well drilling programs, the TH5/TH5M module is designed for mounting on a lightweight truck or trailer.

TH10LM

The TH10LM (Long Mast) provides the convenience of a longer derrick for handling 6 m (20 ft.) drill pipe and is ideal for deeper wells where a longer drill pipe saves time and labor. Designed to be mounted on a local 4X2 or 4X4 truck, the unique foldable tower allows this drill module to be packed and shipped in a 6 m (20 ft.) container.

TH10

The hydraulic powered, multi-purpose TH10 drill, designed to drill 152 mm to 254 mm (6 to 10 in.) diameter holes to depths of 212 m (700 ft) using DHD, air rotary or mud module, offers exceptional features and benefits usually found in water well drills twice its size. Suitable for truck or trailer mounting, this rig is simple to operate and maintain in remote locations using local resources. Modules are available with no mud on board or with a selection of mud pumps.
